LIST OF CONTENTS

NUMBER 1

i Softstrip® computer-readable data strip containing the table of contents of this issue of *Computers & Fluids*

P. W. Duck 1 Triple-deck flow over unsteady surface disturbances: the three-dimensional development of Tollmien–Schlichting waves

E. V. Vorozhtsov 35 On the classification of discontinuities by the pattern recognition methods

Ira M. Katz and **Edward J. Shaughnessy** 75 Computer aided analysis of 1-D compressible flow problems in a Lagrangian particle description using the α method

J. C. T. Wang and **G. F. Widhopf** 103 Numerical simulation of blast flowfields using a high resolution TVD finite volume scheme

Charles Dalton and **Xuegeng Wang** 139 The vortex roll-up problem using Lamb vortices for the elliptically loaded wing

I Announcements

V Software Survey Section

NUMBER 2

i Softstrip® computer-readable data strip containing the table of contents of this issue of *Computers & Fluids*

J.-A. Desideri, N. Glinsky and **E. Hettena** 151 Hypersonic reactive flow computations

Ira M. Katz and **Edward J. Shaughnessy** 183 The equations of 1-D compressible flow with area change in a Lagrangian particle description

V. Venkatakrishnan 191 Viscous computations using a direct solver

N. Ramanan and **Seppo A. Korpela** 205 Thermocapillary convection in an axi-symmetric pool

Thomas R. Furlani and **John A. Lordi** 217 Implementation of the direct simulation Monte Carlo method for an exhaust plume flowfield in a parallel computing environment

V. Babu and **Seppo A. Korpela** 229 Three-dimensional thermocapillary convection in a cavity

I Software Survey Section

NUMBER 3

i Softstrip® computer-readable data strip containing the table of contents of this issue of *Computers & Fluids*

M. Shapira, D. Degani and **D. Weihs** 239 Stability and existence of multiple solutions for viscous flow in suddenly enlarged channels

A. M. Davies and **R. Proctor** 259 Developing and optimizing a 3-D-spectral/finite difference hydrodynamic model for the CRAY X-MP

Adel Boules 271 A finite element approximation of the flow in a curved tube

William D. Gropp and **Edward B. Smith** 289 Computational fluid dynamics on parallel processors

O. R. Asfar, J. A. Masad and **A. H. Nayfeh** 305 A method for calculating the stability of boundary layers

I Corrigendum

III Announcements

IX Software Survey Section

NUMBER 4

S. Thangam and **Doyle D. Knight** 317 A computational scheme in generalized coordinates for viscous incompressible flows

Alison Andrews Vogel 329 Automated domain decomposition for computational fluid dynamics

Yutaka Tanaka and **Brian E. Milton** 347 Three-dimensional analysis of flames ignited at double spark locations

J. D. Ramshaw and **V. A. Mousseau** 361 Accelerated artificial compressibility method for steady-state incompressible flow calculations

Tuncer Cebeci, Hsun H. Chen and **Kalle Kaups** 369 A method for removing the coordinate singularity on bodies with blunt rounded noses at incidence

Veer N. Vatsa and **Bruce W. Wedan** 391 Development of a multigrid code for 3-D Navier–Stokes equations and its application to a grid-refinement study

Andreas Lippke and **Helmut Wagner** 405 A reliable solver for nonlinear biharmonic equations

I Announcements

VII Software Survey Section
N3S (2.1)—an industrial finite element code for turbulent incompressible flows, contributed by Jean-Paul Chabard
